

Together we will

turn loss into hope

Sarcoma, a cancer that can develop in the bone or soft tissue, accounts for about one percent of adult cancers. Jim Lill's wife, Tiffany, was part of that one percent. The disease took Tiffany's life, but her fight lives on through "STEEL Lillies."

STEEL Lillies, created by Tiffany to raise awareness of and research funds for this rare cancer, is now led by Tiffany's family and friends. Together, they made a \$250,000 commitment to support the James P. Wilmot Cancer Center that enabled the recruitment of talented physician-scientist Emily Carmody Soni '03M (MD).

Dr. Carmody's innovative research seeks to advance our understanding of sarcoma and, ultimately, eliminate it. Your gift helps support the research that keeps hope alive for those who need it most.
